

## CONDITIONS

In case of an order for the first time, the details of the mare and the owner have to be given to us per fax or personally.

After receiving these details and the payment of the gross price of the semen we give our clients the frozen semen, or accomplish the insemination.

The price of the semen includes providing semen to the mare during 3 heat periods. The gross price of the semen does not include the veterinary costs.

In case of taking the service, the owner of the mare agrees with the following conditions:

- The insemination archived outside of the Pataki Stud's (AIRVENT, Kecskemét) territory can be only accomplished by a for insemination approved expert, who also makes the necessary rectal gestation control.
- The owner of the mare engages the ancestry control of the foal born from the insemination.
- In case of abortion the owner of the mare must make the locally authorized veterinary to confirm the abortion in script, and sends it to the Pataki Stud (AIRVENT, Kecskemét).

The Airvent Stud undertakes the insemination of the guest mares staying at the stud, with the following conditions:

- After having taken the mare to the Airvent Stud, the veterinary makes an ultrasonic examination (for an extra fee), diagnoses the heat and the capability of pregnancy. If the mare is not capable within the following three days to be inseminated, the owner can decide if he:  
a., takes the mare away, and then only the price of the ultrasonic examination is to be paid,  
b., or leaves the mare at the Pataki Stud. In this case the stabling of the mare costs 1200 HUF + VAT per night and is to be paid from the date of arrival. The veterinary costs have to be paid as well, to the veterinary.

Guest mares are accepted to taken in for insemination at the Pataki Stud, if they suit the following conditions:

- The mare must have EHV1, EHV4 and flu vaccination, which has been done maximum 3 months ago.
- The mare needs to have a certification that she had a worm cure maximum 1 month ago.
- The mare has to have a passport, with the following confirmations: vaccinations against virulent anaemia, glanders and breeding crippledness. If the mare does not have a passport, she needs to have a confirmation, that the passport is being issued. These documents have to be given us when the mare arrives to the Pataki Stud. (Otherwise we cannot accept the mare.)
- The Pataki Stud can only accept to stable guest mares, who are taught enough to archive the examinations (can be led, can be brushed, can be tightened, etc.)
- The owner of the mare agrees that the Pataki Stud does not have to undertake the insemination of mares where the possibility of pregnancy is not assured or where the owner of the mare does not co-operate with the Stud undertaking the insemination. (He does not fulfil the above mentioned conditions.) The owner of the mare agrees

that the Pataki Stud is not responsible for the sure pregnancy, for avoiding twin-pregnancy, for the possibility absorption of the embryo or abortion.

- The mare can be transported from the Stud, if all the above mentioned costs are paid to the Stud.

**Stabling:** includes box and supply. **In case of stabling we make an extra contract with the owner of the mare.**

The Pataki Stud also undertakes providing semen for taking away to other stations. In this case the owner of the mare has to arrange the transportation of the semen.

Fresh semen and the insemination at the Stud can be ordered on semen-taking days till 7.30 am.

If the mare does not get pregnant during the insemination made through 3 periods, there is a possibility of inseminating an other mare. In this case the semen does not have to be paid again, only the insemination ticket, the veterinary costs and the semen-taking fee. In case of abortion we provide semen for the already inseminated mare through 3 periods (see above) if the authorized veterinary confirms the abortion and the mare got the required vaccination during the pregnancy (against herpes virus), which is also confirmed in her vaccination book.

If the abortion happens at the end of the insemination period of the year, or after that, and there is no more possibility to inseminate a mare that year, the service can be used again the following year.

Kecskemét, .....2006

I agree,

.....

Owner of the mare
